

Timely Signs

How to Apply and Care for Magnetic Signs

Follow these 3 easy steps for best results.

Step 1

For car and truck applications, be sure the vehicle is clean and well waxed.

Step 2

Be sure that both the surface where the magnetic vinyl is to be applied and the plain brown magnetic side of the sign are free from moisture, dirt, dust and other foreign particles.

Step 3

Before applying, allow the magnetic signs to warm to room temperature. The temperature of the metal surface is not a factor. Allow one edge of the magnetic sheet to contact the metal surface. The rest of the sheet will then adhere itself to the surface as you allow it to make contact.

If repositioning is required, remove the entire magnetic sheet and reposition. Do not attempt to pull into place, as this could scratch the metal surface and stretch the magnetic sheet.

Care and Maintenance

It is common for moisture to collect between the magnetic sheet and the metallic surface. Remove the sheet at least once a week and dry both the magnetic and the metallic surface. This is particularly important for cars and trucks.

IMPORTANT: Failure to periodically clean and reposition your magnetic sign could result in damage to both the sign and the metallic surface.
